- **Aquaculture Technology**

CMA provides technical and research consultancy to international clients in developing and manufacturing systems for crop management and mechanization.

CMA has expertise in irrigation monitoring, plant nutrition monitoring, pest and disease management and Integrated Pest Management across a range of tropical and sub-tropical cropping systems.

CMA has the capacity to design and build equipment for specialized applications for water and crop management.

Latest projects:

Development of a mechanized Tapioca planting system for Crop Tech Asia to facilitate expansion and yield increases in the bio-fuels industry in Thailand.

Develop an energy efficient, high capacity aeration system for the aquaculture industry.

Develop crop monitoring software and sensors to improve the efficiency of irrigation and fertilization of intensive agricultural and horticultural crops.

Develop area wide pest monitoring systems for the management of major pests in Australia and Asia

Develop efficient drip irrigation systems for tapioca and sugarcane in conjunction with Crop Tech Asia (Thaus Co Ltd.) Thailand.
